

# Video surveillance with Finnish expertise

**Obseron Video Management Software**

**obseron**

# One software for all your cameras

## Obseron streamlines surveillance

Obseron is an easy-to-use software for the purpose of efficiently managing surveillance cameras and systems. Obseron is scalable to all kinds of video surveillance systems, and can be used on a desktop, as well as mobile devices using the Obseron mobile app. We already perform so many of our important daily tasks on laptops, smartphones and tablets, so why not video surveillance?

### Made in Finland

Finland is known the world over for excelling in technology, of which countless Finnish innovations are proof. Obseron software likewise is coded in Finland with Finnish expertise and know-how.

# Smashing boundaries

## Obseron has numerous applications

A good video surveillance software should serve the needs of its user, not vice versa. That is why Obseron is made to serve customers from a variety of different backgrounds, providing solutions to challenges in fields such as the following:

- Industry
- Shipyards
- Shopping malls
- Stores and supermarkets
- Stadiums and venues
- Parking areas
- Warehouses and logistics
- Construction sites
- Service stations
- Restaurants and bars
- Small businesses
- Housing companies
- Schools and daycare centers
- Private residences

# Efficient and effortless

## Obseron gives video surveillance a boost with easy-to-use features

### Monitor processes

Obseron enables all-encompassing remote surveillance of a business and its processes. The time-lapse feature allows insight into how projects are coming along, and surveying loading docks, finding missing packages and clearing up uncertainties related to importing and exporting goods has never been easier.

### Prevent trespassing

Access control becomes more difficult the more people and vehicles are on the move. The solution is in support provided by security cameras connected to Obseron. For instance, the software's motion detection will trigger an alarm and send a notification of unsanctioned activity in a surveyed area.

### See where you otherwise couldn't

With Obseron you can have eyes in places where people simply can't go, such as robot work areas, areas for storing and handling hazardous materials, confined spaces, and areas with radiation or extreme hot or cold.

### Ensure smooth flow of traffic

Surveillance cameras together with the Obseron license plate recognition feature enable opening gates and barriers remotely, which speeds up traffic and eliminates unnecessary traffic jams. Clearing up uncertainties after the fact also becomes easy when you have a clear record of which vehicles have passed through at what time.

# Uncover the hidden potential of your business

## Obseron helps get the most out of video surveillance

### Eliminate loss

An efficient security camera system is a powerful deterrent to potential thefts and break-ins. By preventing trespassing, security cameras help prevent loss resulting from burglaries. Video surveillance is also a powerful tool in preventing possible misuses at registers.

### Prevent accidents

A camera image is not affected by human awareness or error. When a camera monitors processes with constant efficiency, locating and fixing problems becomes all the more easy. In turn it is possible to ensure the safety of both staff and customers by preventing accidents and mishaps.

‘An efficient security camera system is a deterrent to potential thefts and break-ins.’

### Boost profitability

Obseron enables getting an all-encompassing view of business practices and processes. This way it is possible to find bottlenecks in workflow and improve efficiency. When work becomes easier and less taxing, profitability goes up.

# Easily scalable

## Obseron adapts to different systems effortlessly

Obseron is scalable to video surveillance systems of all sizes, making managing them effortless. Systems can consist of one or more recorders, as well as remote clients. Both IP and analog cameras can be connected to Obseron.

# Modern solutions made cost-effective

## Bring your old system up to speed

Obseron can be used as part of a brand new system, or it can be connected to an existing one. Whatever your hardware, with Obseron you can bring your old system up to date. In the absence of a pre-existing system, our large network of experts can deliver and help you choose the system best suited to your needs.

## Regular updates to Obseron ensure your system is always up to date

Obseron product development has been active since 2004. We know that software that might've been top of the line ten years ago, or even one year ago, is not guaranteed to be so today. That is why we offer regular updates to our software, so our clients always have an up-to-date program at their disposal.
